

Respecting Nature Serving Communities

Moreover, the Company continues to seek new ways to make ever-larger contributions to the societies in which it operates.

Green Management Implementation

Samsung Electronics is showing leadership in the effort to balance the needs of people with the needs of nature in the 21st Century.

S.T.A.R. Programme Samsung Takeback and Recycling Programme

S.T.A.R. Programme

(Samsung Takeback and Recycling Programme)

Following on from our very successful [Green Management Programme](#), Samsung Electronics is pleased to offer our customers a process for returning used printer cartridges free of charge. Available initially in most European countries, the Samsung Takeback and Recycling programme not only helps to remove used cartridges from the general waste stream which would normally go to landfill, but also encourages our customers to adopt environmental responsibility into their daily decisions.

All returned cartridges will be recycled back into useful materials, which then go on to become new products again. Any parts that cannot be recycled will be treated and disposed of in a way that causes minimal environmental impact. This ensures that the maximum value from each returned cartridge is obtained.

Samsung Electronics is committed to fulfilling its obligations as a corporate citizen, and we hope you will help us to achieve these goals.

Participation is easy, simple and free of charge. Simply select your Country from the drop-down menu below and follow the instructions.
